Without using traditional software, it will quickly and easily remove noise, harmonics, hiss, buzz, clicks and hum from your

recordings, for your immediate enjoyment. Whether you have a cassette, old LPs, tapes or a digital recording, you can gain a quality listening experience within minutes. In addition to the typical noise reduction features, such as the ability to auto-detect the type of noise you are trying to remove, SRTE v2.1 can separate a recording into individual instruments, re-mute overlapping or undesirable sounds, and remove and restore harmonics. This allows you to take advantage of the full length and quality of your recordings, from the earliest era of broadcast to current high-quality digital recordings. The most noteworthy features of SRTE v2.1 are the improved user interface and an updated calibration process that's much faster and easier to use than in SRTE v1. As always, the whole point of Sound Rescue is to help you to enjoy your music, because we are passionate about our hobby. We want you to have the ability to listen to the music you love without the obstacles that surround you in modern recordings. We're very proud to present the release of Sound Rescue TerraTec Edition v2.1, a vastly improved version of the world's most popular noise reduction software. It will clean your recordings, giving you a quality listening experience even from the earliest broadcast recordings and cassette tapes through to modern recordings on CDs or MP3s.
